

# API version history

The Payline payment solution is constantly evolving to bring you more and more features designed to increase your sales and reduce your fraud.

The webservice API SOAP Payline is therefore likely to be modified to be able to collect new information. Of course, backward compatibility with older versions is assured.

The "version" field of the API allows you to specify in which version you want to use the Payline API.

By default, version 4 is applied.

The latest version of the WSDL descriptor file of the webservice SOAP Payline API can be downloaded via the following link:

<https://services.payline.com/V4/services/DirectPaymentAPI?wsdl>

The table below describes the differences between each version:
