

Webservice - manageWebWalletRequest

Request	Response
---------	----------

The manageWebWallet function is used to initialize the creation of a virtual wallet via the Web interface.

This feature allows management of wallet cards. Once your client will be able to:

- consult the cards registered on his wallet;
- delete a card registered on his wallet;
- add as many cards as you want in your wallet;
- set as a default payment method a card from his wallet.
