# Codes - WalletSecured

The "walletSecured" tag in the "Buyer" object can have the following values :

| Value | Description |
|---|---|
| Empty | No value.<br>Payment without CVV or 3DSecure (no liability shift). |
| CVV | Payment with CVV request and without 3DSecure (no liability shift). |
| CVV+3DS | Payment with CVV and 3DSecure request authentication.<br>3DSecure payment is only possible if the selected contract is 3DSecure. The CVV will be required even if the contract or card is not 3DS.<br>The 3DSecure block below will be present on the payment pages if the contract is 3DSecure:<br>  |
| 3DS | Payment with 3DSecure request authentication. |

From release 24.2, if the payment method contract is 3D Secure, then an authentication request is systematically performed.
