What is Samsung Pay ?

The main points

- Samsung is the leading smartphone brand in France (by volume).
- Samsung Pay is the native mobile payment solution for Samsung smartphones and smartwatches.
- Samsung Pay offers a simple and secure contactless purchase process at point of sale but also inApp and web payment (in accordance with the new European DSP2 regulations requiring strong authentication).
- Samsung Pay integrates, beyond payment, many added-value features encouraging customers to use the application on a daily basis, but also making it possible to form partnerships with brands (loyalty card, partner coupons, communication / marketing tool , Samsung Rewards, Transport cards, etc.).

Payline offers you to integrate this new payment method on e-commerce sites and mobile applications.

You can consult the list of eligible devices and French partner banks on the Samsung Pay web page.

The 3D Secure functions and the shortcut mode are not available.

Synchronous / asynchronous processing

Payment processing is carried out in synchronous mode. The merchant receives the response in real time.

What is the user experience ?

Payment flow of a payment from a mobile

To make a payment with Samsung Pay within mobile application or website from your mobile :

1. The user selects Samsung Pay as the payment method ;
2. Then choose his payment card (if he has registered several cards) ;
3. And finally validates the transaction by authenticating using (your choice) iris recognition, fingerprint reader or PIN code.

Payment flow of an e-commerce payment from desktop

1. The user selects Samsung Pay as the payment method on the merchant site from their computer.
2. The Samsung Pay application is woken up on his mobile via a notification (you must enter your Samsung account or mobile number the first time you use it to make the link).
3. The user chooses their payment card on the Samsung Pay app (if they have registered more than one).
4. The user validates the transaction, from Samsung Pay, by authenticating using iris recognition, fingerprint reader or PIN code.
5. The merchant site confirms the order.

What reporting is available ?

Payline back office displays transactions in real time and in following reporting files :

- transaction file.
- payment file with or without the reconciliation option (settlement).
