Plugin settings

The plugin configuration is divided into several sections, accessible via the menu : **Stores> Configuration> SALES> Payment Methods**

The Access key must be retrieved directly from your Payline administration center, if you need help, see this link [What is the access key and where to find it?](#)

Payline

Access your [Monext Administrative Center](#) in order to manage your Payline account, check follow transactions or check technical issues.

Common settings

ID de marchand <small>[vue magasin]</small>	<input type="text" value="54333332346169"/>
Access key <small>[vue magasin]</small>	<input type="text" value="....."/>
Environnement <small>[vue magasin]</small>	<input type="text" value="Test"/> ▼
Langue <small>[vue magasin]</small>	<input type="text" value="French"/> ▼
Débogage <small>[vue magasin]</small>	<input type="text" value="Oui"/> ▼
Proxy Enabled <small>[vue magasin]</small>	<input type="text" value="Non"/> ▼

Authentication

Enter your merchant ID and your access key in the two corresponding fields. The plugin automatically detects for which environment (certification or production) the parameters are intended, and offers additional fields for entering the parameters of the other environment.

Environment selector

When the parameters of the two environments are filled in, a button allows you to indicate which environment to use.

Proxy settings

When saving the authentication parameters, the plugin detects whether a proxy is preventing connection to Payline (the library returns an error code XXXXX, "could not connect to host"). If necessary, 4 fields are displayed for entering the host and port of your internet proxy, as well as the authentication parameters with the latter.

Technical Note 1

The proxy is detected via the response of the getMerchantSettings web service.

An XXXXX return code indicates a connection error to Payline, the additional message "could not connect to host" indicates the presence of a proxy.

Technical Note 2

The getMerchantSettings web service is called during the validation of the form to check that the identifiers have been entered correctly and to determine the environment.
Its response must be stored for the configuration of the means of payment.

Payment setup

Selection of the main payment methods

The list of payment methods configured on your Payline account is automatically imported when you save your authentication settings.
In this list:

- Check the payment methods you want to offer your customers to pay for their order
- Associate them with an amount range to filter their display based on the order total

[Technical appendix](#)

These contracts are entered in the **selectedContractList** list of the **doWebPayment** web service.

⌵ Payline Contracts

Contracts
[vue magasin]

Shop FR - Magento 1 : ONEY 3X (ONEY)
Shop FR - Magento 2 : VAD (CB)
Shop FR - Magento 2 : ONEY 4X (ONEY)
Shop FR - Magento 2 : PAYPAL (PAYPAL)
Shop FR - Magento 2 : VADS (CB)
Shop FR - Magento 2 : ONEY 3X (ONEY)
Shop FR - Prestashop : PAYPAL (PAYPAL)
Shop FR - Prestashop : ONEY_x4_Sans frais (ONEY)
Shop FR - Prestashop : VADS (CB)
Shop FR - Prestashop : 1EURO.COM (1EURO.COM)

Refresh Contracts

Selection of secondary payment methods

Increase your conversion rate by immediately allowing your buyers to retry payment after a failure.
Select from the displayed list the means of payment that will be offered for this retry.

[Technical appendix](#)

These contracts are entered in the **secondSelectedContractList** list of the **doWebPayment** web service.

Payment solution

You can adjust the configurations:

- Payment cash CPT,
- Payment N Times,
- Redirection specific payments.

You find a detail of the parameters below.

Web Payment CPT - Intégration type

The Payline plugin can be integrated into the Magento 2 checkout in 3 ways:

- **Redirection to the payment page** : after validating the order summary, the buyer is redirected to the Payline payment page. The **page personalization** list allows you to select the personalization code, among those created via the administration center, which applies to your payment page.
- **integrated** : the payment data entry form is an integral part of the checkout form. Two component layout options are available: **tab** and **column**
- **lightbox** : the payment data entry form appears in a lightbox when the order summary is validated.

☞ Payment solutions

☞ Payline - Web Payment Cpt

Sélectionnez les paiements dans votre panier. Payline traitera vos paiements par carte via la passerelle Payline ou le widget.

Activé [vue magasin]	Oui	▼
Titre [vue magasin]	Paiement avec Payline	
Type d'intégration [vue magasin]	Inshop	▼
Affichage Inshop [vue magasin]	tab	▼
Action de Paiement [vue magasin]	Autoriser et collecter	▼
Activer les portefeuilles [vue magasin]	Oui	▼

Web Payment CPT - Payment action

When do you want your buyers to be debited?

- **When ordering** : payments are made in authorization + validation mode
- **On dispatch** : payments are made in authorization mode. Select the order status which triggers the invoicing of the order, and the validation of the payment
- **Deferred** : payments are made in authorization mode. In the Payline administration center, your VAD contract is configured for automatic validation on D + x. No action in the Magento back office interferes with this operation.

[Technical appendix](#)

Payment on order corresponds to **action** code 101 in the call to **doWebPayment** . For deferred payment and shipping, code 100 is used.

Web Payment CPT - One Click Payment

Activate this option to offer payment data recording to your buyers. In future orders, they will be displayed next to the entry form for a new card.

[Technical appendix](#)

The activation of One Click corresponds to the valuation of the **buyer.walletId** parameter of **doWebPayment** , a **unique** identifier generated by the plugin and associated with the buyer account.

Installments Payment

This payment method allows merchants to offer buyers payment for purchases in several installments in redirect mode only.

Payline - Web Payment Nx

Customer will select card payments and schedule through the Payline Gateway.

Activé [vue magasin]	<input type="text" value="Oui"/>
Titre [vue magasin]	<input type="text" value="Paiement 3 fois sans frais"/>
Type des frais de récurrence [vue magasin]	<input type="text" value="Pas de frais"/>
	(hors frais de livraison)
Message de redirection [vue magasin]	<div>Vous allez être redirigé vers notre plateforme de paiement après avoir valider votre commande.</div>

Advanced settings

Minimum amount [vue magasin]	<input type="text" value="0"/>
	To display, check if the cart amount is greater than or equal to the minimum amount
Nombre d'échéances [vue magasin]	<input type="text" value="3"/>
Délai entre deux échéances [vue magasin]	<input type="text" value="Quotidien"/>
Envoyer l'identifiant du portefeuille [vue magasin]	<input type="text" value="Non"/>
	If wallet id is provided, wallet payment will be available during web payment

Special Payments to Redirection: Klarna / Oney

The default setting is proposed as shown below:

⌵ Paramétrages spécifiques pour contrats

Merci de renseigner les champs "Configuration livraison" et "Methode de livraison Magento" en priorité.

Configuration livraison [vue magasin]				
Mode de livraison	Type de livraison	Mode de livraison	Delai de livraison (j)	Action
<input type="text" value="[flatrate] f"/>	1 - Expres	1 - Collect	2	
<input type="text" value="[freeship]"/>	6 - Two-day	1 - Collect	4	
<input type="button" value="Add Configuration"/>				

Configuration du titre [site web]		
Préfixe	Titre	Action
<input type="button" value="Add Configuration"/>		

⌵ Valeurs par défaut

Type de livraison [site web]	<input type="text" value="Standard"/>	▼
Mode de livraison [site web]	<input type="text" value="Mail (Colissimo, UPS, DHL, etc., or any private courier)"/>	▼
Delai de livraison (j) [site web]	<input type="text" value="3"/>	
Préfixe [site web]	<input type="text" value="Mr. / Mister"/>	▼

Configure order statuses

Define here the correspondence between the result of the payment returned by Payline, and the status of the order.
The process can suggest various results:

- current payment session
- payment authorized
- payment validated
- cancellation by the buyer
- refusal of payment
- waiver of payment
- fraud alert

⌵ Payline - Web Payment Nx

Customer will select card payments and schedule through the Payline Gateway.

Activé [vue magasin]	<input type="text" value="Oui"/>
Titre [vue magasin]	<input type="text" value="Paiement 3 fois sans frais"/>
Type des frais de récurrence [vue magasin]	<input type="text" value="Pas de frais"/>
	(hors frais de livraison)
Message de redirection [vue magasin]	<div><p>Vous allez être redirigé vers notre plateforme de paiement après avoir valider votre commande.</p></div>

⌵ Advanced settings

Minimum amount [vue magasin]	<input type="text" value="0"/>
	To display, check if the cart amount is greater than or equal to the minimum amount
Nombre d'échéances [vue magasin]	<input type="text" value="3"/>
Délai entre deux échéances [vue magasin]	<input type="text" value="Quotidien"/>
Envoyer l'identifiant du portefeuille [vue magasin]	<input type="text" value="Non"/>
	If wallet id is provided, wallet payment will be available during web payment
